CONSTRUCTION, INSTALLATION AND MAINTENANCE CHARGES

E. SERVICE DROPS

1. Facilities Provided of Type Determined by Telephone Company

Service Drops are provided either by aerial facilities - on poles of the Telephone Company or of other companies - or by underground facilities (buried), and, except as covered in 2 below, the type of facilities used is determined by the Telephone Company from the conditions involved. For facilities of the type so determined, the following treatment applies:

- a. A Service Drop measuring not more than 250 feet is provided without construction charge. For the measured distance in excess of the 250 foot allowance, a facility charge applies as described elsewhere in the Company's tariffs.
- b. The measurement is the airline distance from the center of the highway paralleling the general distribution plant (located on or off the highway) to the terminal or Drop at the customer's building, or the air-line distance from the distribution plant to that terminal, whichever is shorter.

2. Facilities Provided of Different Type than 1 above.

When from the conditions involved the Telephone Company determines that an aerial Service Drop should be provided and in lieu thereof the applicant desires underground or buried facilities, or when aerial facilities are used to provide service or channels to a customer and subsequently the customer requests that such facilities be placed underground, the following applies:

- a. Where cable is laid in conduit, the underground conduit shall be constructed and maintained by or at the expense of the customer and in addition the customer shall pay the cost of the underground cable - including the cost of installing it - less the estimated cost to the Telephone Company of installing such aerial facilities (not in excess of the 250 foot allowance specified in C.1.a.) as would be (or is) required to furnish the same service. The underground conduit shall be constructed in accordance with plans and specifications furnished by the Telephone Company; ownership of the conduit is retained by the customer.

The duct or ducts required in the underground conduit by the Telephone Company to furnish service shall be reserved for its exclusive use.

- b. Cable installed in conduit will be maintained and replaced at the expense of the Telephone Company where the conduit has been inspected in place by the Telephone Company and approved, but repairs or replacements of cable in conduit or trench made necessary by damages caused by the customer or the customer's representatives will be made only at the customer's expense.
- c. Where facilities are changed from aerial to underground or buried, in addition to the above, the customer is charged the cost of dismantling and removing the aerial facilities in addition to 2.a. preceding.

3. Computation of Facility Charge

- a. The facility charge will be based on cost for Service Wire for extensions in excess of the standard allowances.
- b. All service drop facilities so constructed shall be the property of the Telephone Company.

GENERAL REGULATIONS
MILEAGE MEASUREMENTS

A. AIRLINE MILEAGE (Except for Message Toll Service)

1. Interexchange airline distances are measured between the points involved.
2. For the purpose of determining airline mileages vertical and horizontal grid lines have been established across Michigan. The spacing between adjacent vertical grid lines and between horizontal grid lines represents a distance of one coordinate unit. This unit is the square root of 0.1, expressed in airline miles. A four-digit vertical (V) and a four-digit horizontal (H) coordinate is computed for each rate center from its latitude and longitude location by use of appropriate map projection equations. A pair of V-H coordinates locates a rate center, for determining airline mileages, at a particular intersection of an established vertical grid line with an established horizontal grid line. The distance between any two rate centers is the airline mileage computed between their respective coordinate intersections, as explained in 3. following.
3. To determine the rate distance between any two rate centers proceed as follows:
 - a. Obtain the "V" and "H" coordinates for each rate center.
 - b. Obtain the difference between the "V" coordinates of the two rate centers. Obtain the difference between the "H" coordinates.
 - c. Square each difference obtained in b. above.
 - d. Add the square of the "V" difference and the "H" difference obtained in c. above.
 - e. Divide the sum of the squares obtained in d. above by 10.
 - f. Obtain the square root of the result obtained in e. above. This is the rate distance in miles. (Fractional miles being considered as full miles.)

MILEAGE MEASUREMENTS

A. AIRLINE MILEAGE (Except for Message Toll Service)(Continued)

4. Example:

The rate distance is required between Detroit and Flint.

	V	H
Detroit	5536	2828
Flint	5461	2993
Difference	75	165 (See Note)
Squared	$5625 + 27225 = 32850$	

$$\frac{\sqrt{32850}}{10} = 57.3 = 58 \text{ airline miles}$$

NOTE: The difference is always obtained by subtracting the smaller coordinate from the larger coordinate.

5. The Vertical and Horizontal coordinates for each Michigan rate center are listed in the List of Rate Centers and Central Offices for the United States, issued by NATIONAL EXCHANGE CARRIERS ASSOCIATION, INC. TARIFF F.C.C. NO. 4, which including any amendments thereto or successive issues thereof, is hereby adopted and made a part of this Tariff. A copy of the information therein is posted at the various toll operating centers.
